

Know It's Locked.™

Patented, 180-Degree,
High-Visibility Lock
Status Indicator Trims

FEEL SAFE. BE SECURE.

Schlage indication trims are first and foremost about making people feel safe and secure. Nowhere else is there a greater need for this than in K-12 schools. Across the United States, efforts have been made to understand security weaknesses and develop guidelines to make schools safer. Among the common themes that arise from these studies is the need for the locked or unlocked status to be easily visible on doors.

MADE TO BE SEEN

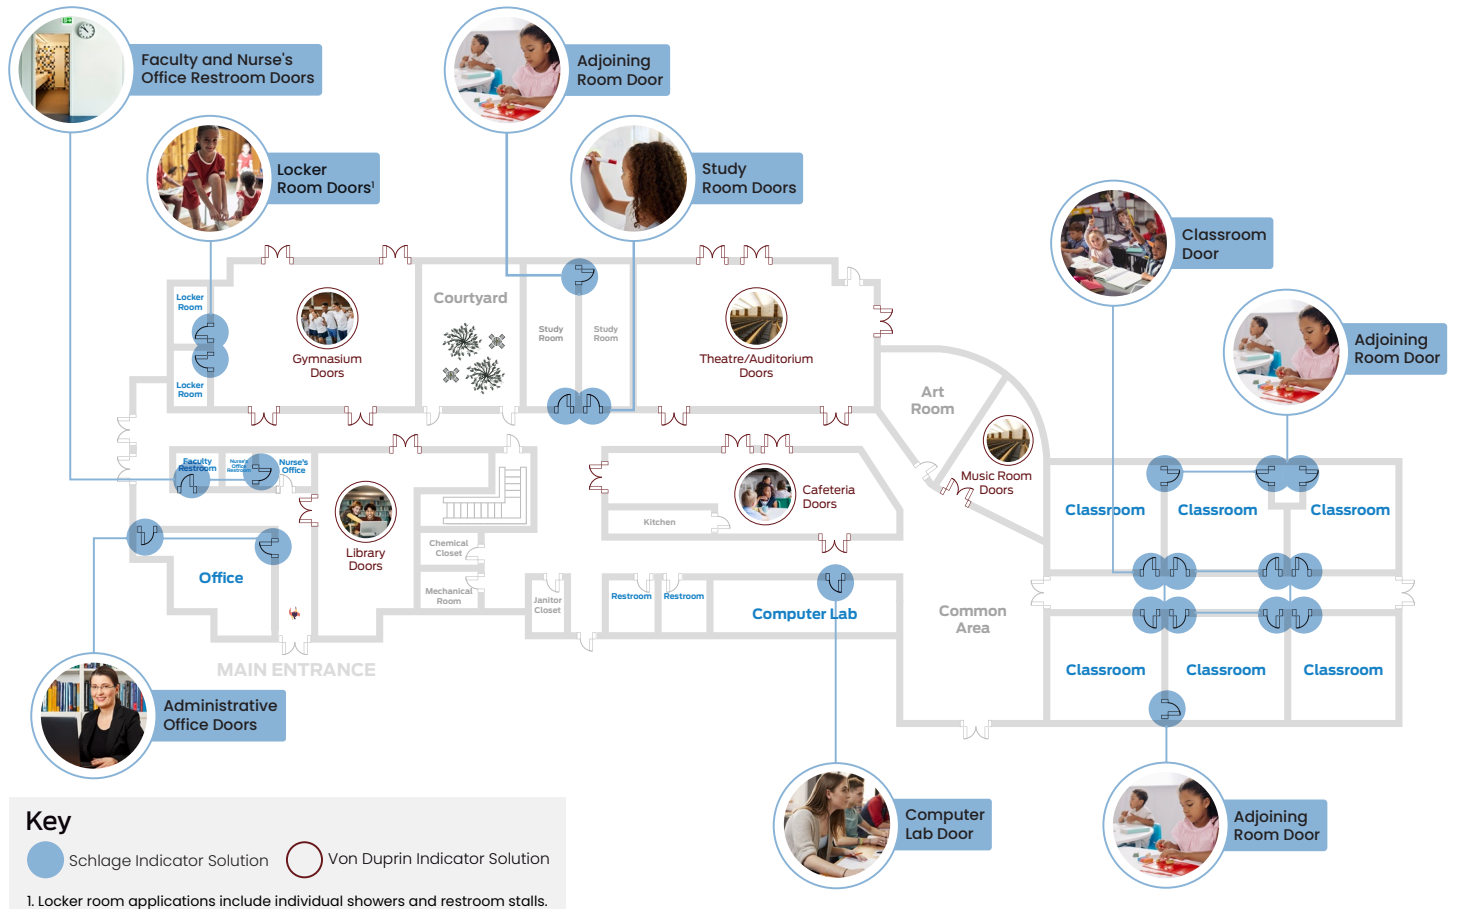

Clear messaging that can be seen across the room and from any position in sight of the door means teachers can focus on calming and protecting students in other ways. Schlage has designed indication trim allowing high visibility at a greater distance than other locks.

- The largest viewing windows in the commercial locks market
- Maximized message size
- Patented, 180-degree visibility
- Available dual (inside and outside) indication options
- Red and white backgrounds to serve color blind needs
- Extensive functions include many locked privacy functions
- For mortise, cylindrical and deadbolt Grade 1 applications with additional Grade 2 deadbolt options
- Durable, best-in-class products made to perform
- Available retrofit kits for mortise and cylindrical installations

We believe
no teacher or
student should
ever have to run
toward danger
to confirm the
status of a door.

APPLICATION GUIDELINES FOR K-12

Beyond the classroom, many spaces within a school environment can benefit from indication to enhance security. Allegion offers various visual and status indication options on Von Duprin exit devices for use in larger spaces, which often have multiple doors, making them more difficult to lockdown. Here, too, you can know it's locked at-a-glance, which is important when seconds count. Also, sometimes feeling secure is simply about creating a sense of privacy as in the case of use on restroom and shower doors.

CREATING SAFER K-12 SPACES

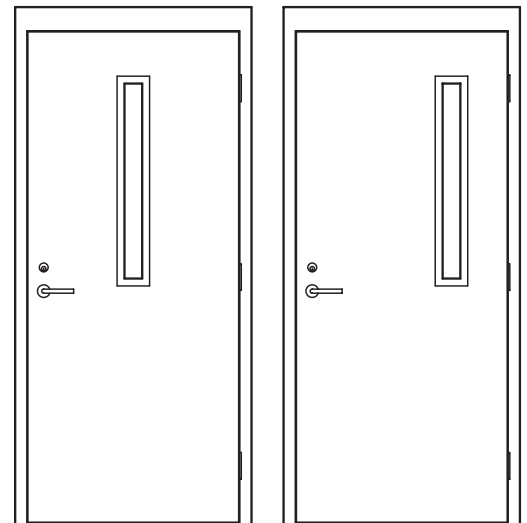

Both the [Allegion](#) and [Commercial Schlage](#) websites offer a wealth of information on school safety best practices as defined by these investigative bodies:

- Sandy Hook Advisory Commission
- Marjory Stoneman Douglas High School Public Safety Commission
- Investigative Committee on the Robb Elementary Shooting
- Federal Commission on [School Safety](#)
- Partner Alliance for Safer Schools ([PASS](#)) [Guidelines](#)

Don't Forget the Door

When designing classroom doors with lights, consider a centered or hinge-side narrow light to allow visibility into the room while ensuring the lever remains difficult to reach if the glass is broken.

If side light or latch-side door lights are preferred, consider using an attack-resistant laminated glazing such as [TGP FireLite Plus](#)® Forced Entry options.

APPLICATION VERSATILITY

With many available functions, in all the key systems, finishes and lever designs common to Schlage locks, you can utilize indication for security, for privacy, and for convenience in many situations.

Higher Education

- Applications similar to K-12
- Study pods
- Rehearsal rooms
- Faculty offices

Healthcare

- Patient bathrooms
- Public restrooms (single use and stall)
- Physician sleeping/on call rooms
- Radiology or other therapy rooms
- Dressing rooms

Commercial Real Estate

- Public restrooms (single use and stall)
- Mother's (lactation) rooms

Retail

- Retail main entries
- Restaurant single use restrooms
- Dressing rooms

Specialized (Double-Cylinder Deadbolt Uses)

- Assembly occupancy main entries requiring notification of locked/unlocked status such as churches supporting 300 or fewer people
- Business, factory or storage occupancy
- Exterior spaces with means of egress through a building
- Rooms requiring temporary closures due to cleaning or stocking
