# Introduction

## Key systems

Patented key systems prevent unauthorized duplication of keys providing greater key control and reduced threat of a compromised key system. Everest 29 keyway families provide the flexibility to secure and restrict the most sensitive openings in a facility while maintaining access control across the entire system.

Everest 29™ is patent protected through 2029 and delivers a higher level of security because it cannot be duplicated without authorization. The backward compatibility of Everest 29 keyways to the legacy Everest keyways provides you with flexibility and security that adapts to your needs. Everest 29 keys will work in existing Everest keyway, but current Everest keys will not work in new Everest 29 keyway. This is because of the patent enabling feature of Everest 29 and what prohibits duplication of the new Everest 29 keys.

Everest 29, Everest, and Classic (Quad and Obverse) key systems can be enhanced and restricted to limited distribution with the addition of Primus XP. Primus XP, Schlage's high security sidebar cylinder mechanism, introduces an added level of security control. It delivers patented key control, geographical exclusivity, and pick resistance with the option of adding UL 437 drill resistance.

Primus RP is patent protected through 2029, and is backward compatible with Primus and Primus XP for Classic Obverse keyway family until 2029. Primus RP, Schlage's high security sidebar cylinder mechanism, introduces an added level of security control. It delivers patented key control, geographical exclusivity, and pick resistance with the option of adding UL 437 drill resistance.

Whether you're retrofitting a building or implementing a key system for a newly constructed complex, Schlage key systems deliver the security you need at every level throughout your building, campus, or worldwide facility.

## Introduction

### Primus and Primus XP compatibility

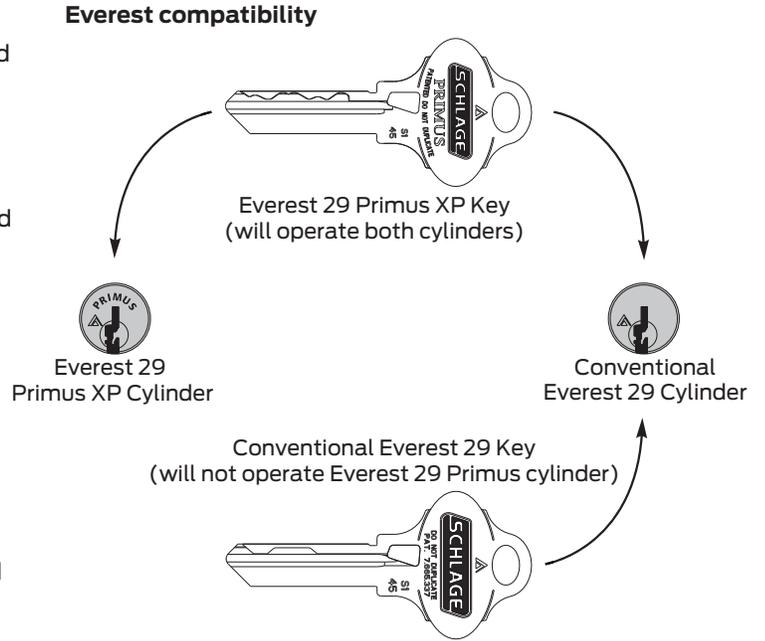

Primus, Primus XP, and Primus RP cylinders can be incorporated into any system using classic keyways including master keyed systems with no adverse effects on the system's expansion.

### Everest Primus and Everest Primus XP compatibility

Everest 29 Primus, Everest Primus, Everest 29 Primus XP, and Everest Primus XP cylinders can be incorporated into any system using the Everest 29 and Everest keyway including master keyed systems with no adverse effects on the system's expansion. This would include use with Everest 29 and Everest Open cylinders and Everest 29 and Everest Restricted cylinders.

### Serviceability

It is unnecessary to invest in any additional servicing equipment for pinning than what is needed to service conventional cylinders. The side biting is cut into the key blanks at the factory and the keys are able to be combined using standard key cutting equipment.

# Terminology

## Keyways

### Classic

Classic Schlage pin tumbler keyways existed before Everest keyways. Obverse is the name of the open family of keyways (C, E, etc.). There is another family of restricted keyways: Quad (Legacy and XP only).

### Everest

Everest cylinders and keys incorporate all new keyways with the patented undercut groove on the right side of the key section.

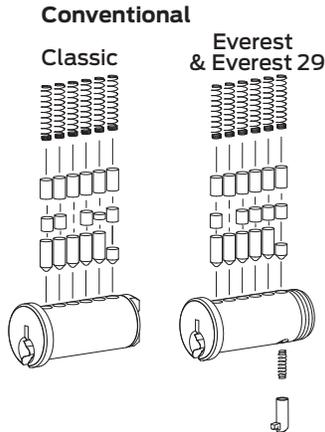

Everest 29 S Family refers to the open family of keyways. R Family (for SFIC and SL\*) and T Family keyways are restricted.

\* Information for SL can be found in the SL service manual.

## Cylinder mechanisms

### Conventional cylinders

Standard cylinders which incorporate a series of locking top pins.

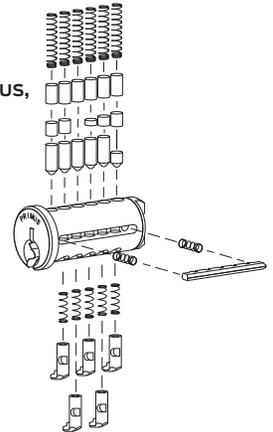

### Primus cylinders

Schlage's high security sidebar cylinder mechanism provides key control, geographical exclusivity, and pick resistance, standard. UL437 drill resistance is optional. Primus keys operate conventional cylinders.

### Primus

Classic, Everest Primus, & Everest 29 Primus

## Key control

### Restricted keyways

Special non-stock keyways set aside for limited use and a higher degree of key control.

A letter of authorization from the end user is required to process orders for Restricted keys, blanks, and cylinders.

### Open keyways

Standard keyways available without any ordering formalities. S Family (Everest 29), C Family (Everest) and Obverse (Classic) keyways are open.

## Cylinder category

### Full size

Pertaining to cylinders (including interchangeable cores), keys, and keyways based on the industry standard plug diameter of about 1/2". All Schlage cylinders except SFIC are full size.

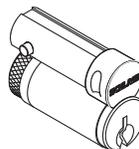

### Small format interchangeable core (SFIC)

A core providing patented key control that is completely interchangeable with Best and its other clones, offered in Everest 29 R, Everest B Family restricted keyways. No Primus version exists.

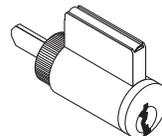

Pins, springs, keys and keyways are based on a plug diameter smaller than the standard 1/2".

### Full Size Examples

### SFIC Example

Full Size IC

Key-in-Knob/Lever

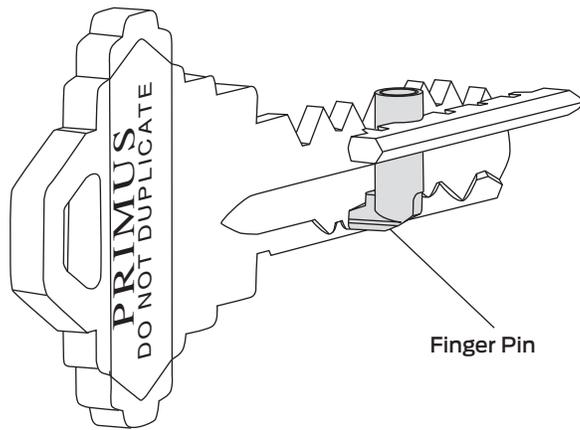

# Construction and operating principles

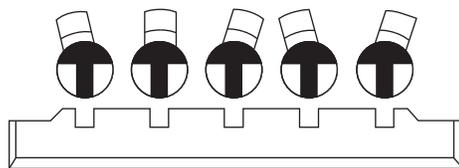

The Primus/Primus XP/RP cylinder is a conventional Schlage cylinder with a few modifications. A sidebar and finger pins are added to the conventional cylinder to provide additional security.

The Primus/Primus XP/RP key has a secondary biting on the side of the blade to accommodate the finger pins. When the key is inserted, each of the side bit cuts lifts the finger pin and rotates it so that the notches in the side bar align with the notches in the back of the finger pins.

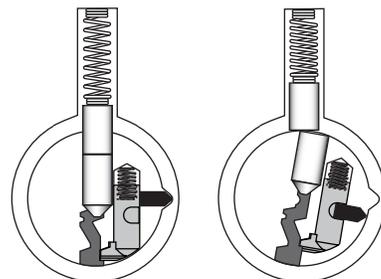

When all notches on the side bar and back of the finger pins are aligned and the regular pins are aligned at the shear line the plug is free to rotate.

Secondary side biting

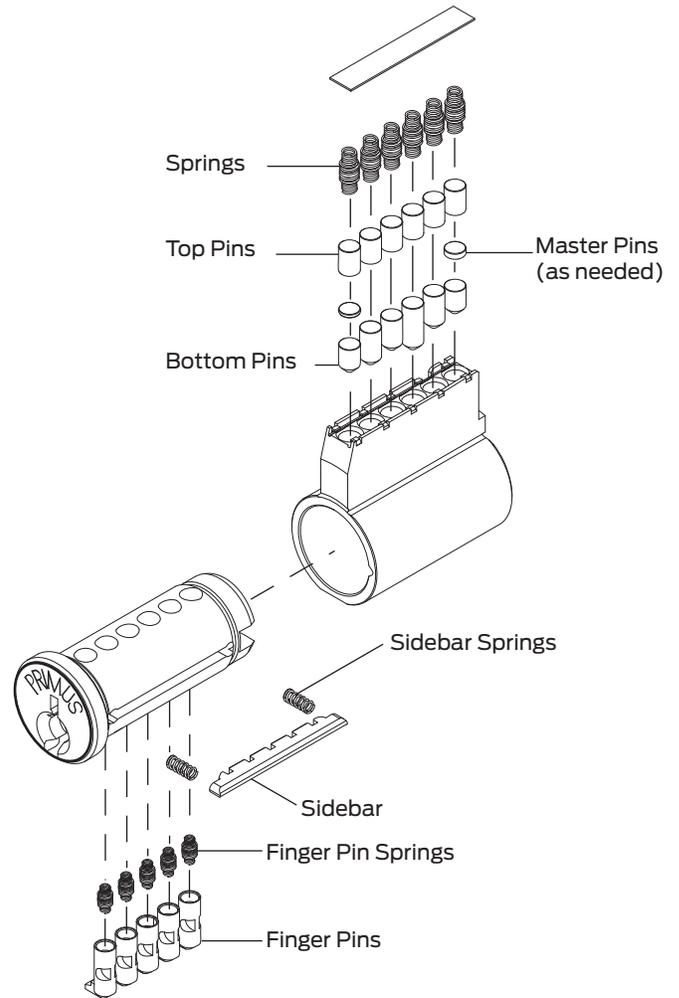

Finger pins rotated

Locked

Unlocked

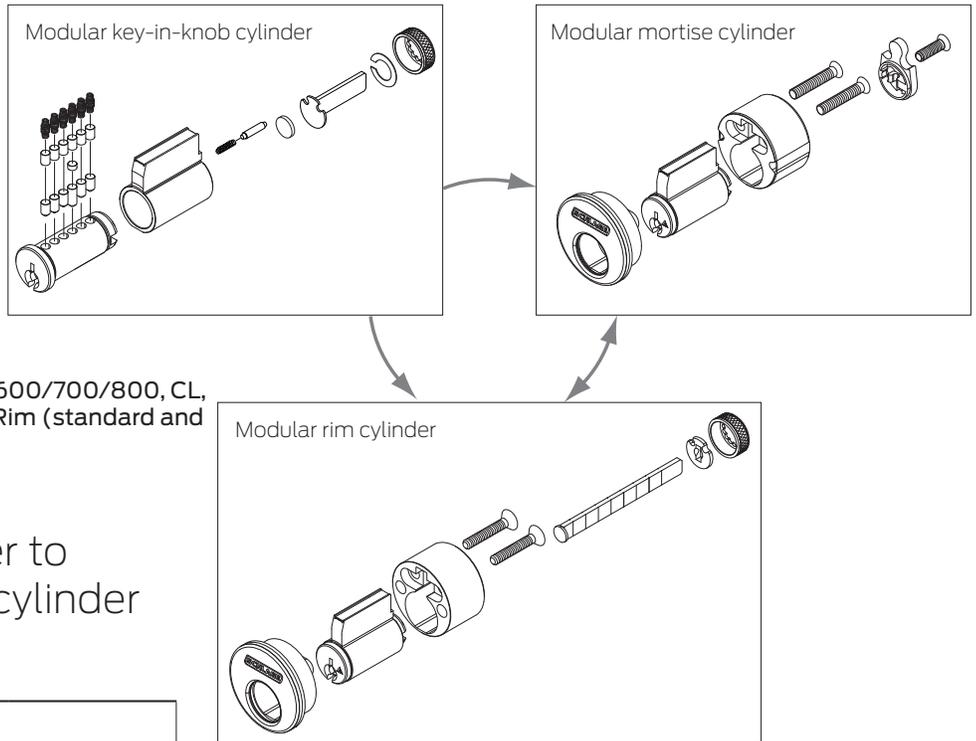

**Modular cylinders**

# Modular cylinders

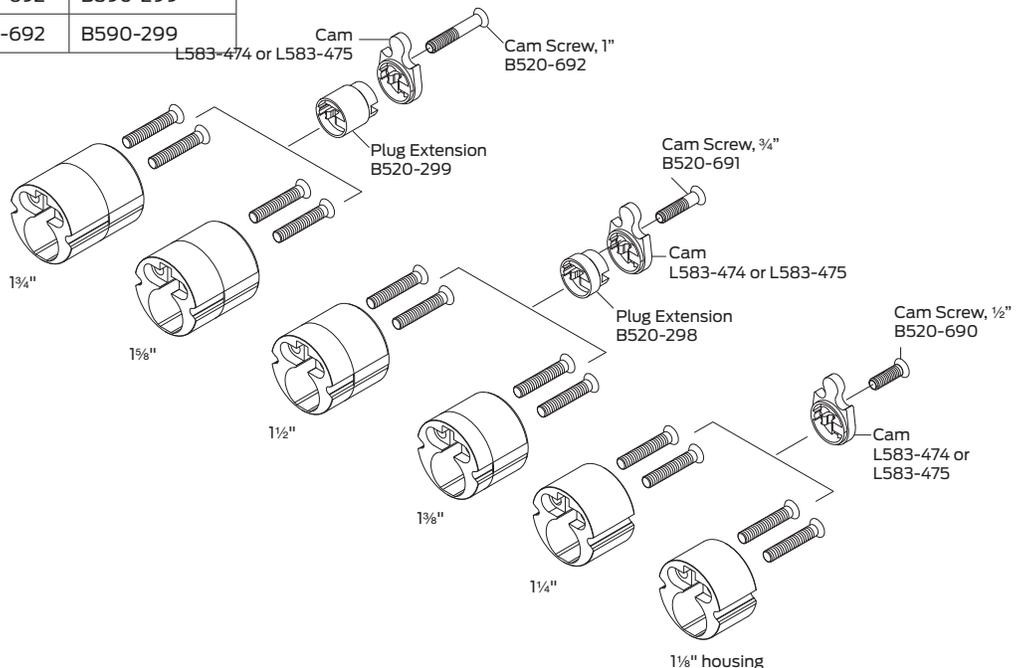

Introduced in April 2010, the Schlage modular cylinder provides easy convertibility between key-in-lever to mortise and rim cylinders. These benefits make Schlage cylinder inventory flexible, reduce the size and cost of inventory and customer lead time, and increase customer satisfaction. With a few modular components in stock, the cylinder type and finish required will always be on hand. The modular cylinder accepts a tailpiece or a mortise cam.

Product line availability: A, ALX, B500, B600/700/800, CL, L, ND, S, S200, Kryptonite (KS, KC), and Rim (standard and lockout).

## Key-in-knob/key-in-lever to modular mortise or rim cylinder conversion

Modular housing interchangeability				
Housing		Cam	Cam screw	Plug extension
Part no.	Size	Part number		
B520-721	1 1/8"	L583-474	B520-690	—
B520-722	1 1/4"	L583-475	B520-690	—
B520-723	1 3/8"	L583-474	B520-691	B590-298
B520-724	1 1/2"	L583-475	B520-691	B590-298
B520-725	1 5/8"	L583-474	B520-692	B590-299
B520-726	1 3/4"	L583-475	B520-692	B590-299

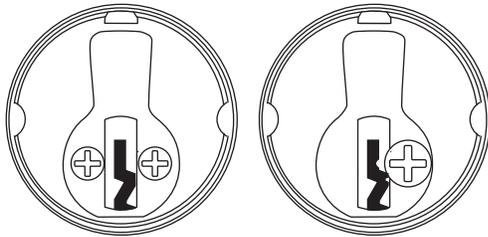

# Cam and tailpiece differences

Prior to April 2010, the cams and tailpieces used in the Primus and Primus XP cylinders were different than conventional cams and tailpieces because of the location of the sidebar and finger pins.

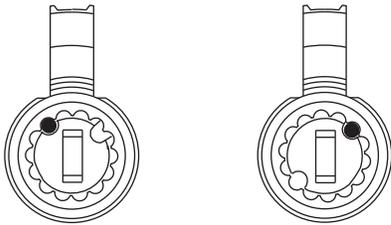

The illustrations below are rear views of the mortise cylinder as well as the key-in-knob/key-in-lever cylinders showing the differences in screw and cap pin locations. All Everest 29 keyway cylinders use the Primus/Primus XP/RP screw and cap pin location.

## Traditional cylinders (prior to July 2010)

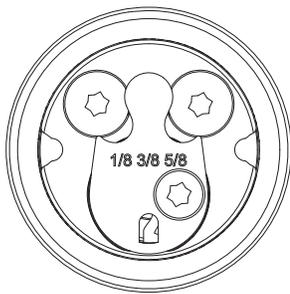

Conventional Classic

Primus & Everest 29

## Modular cylinders

Mortise

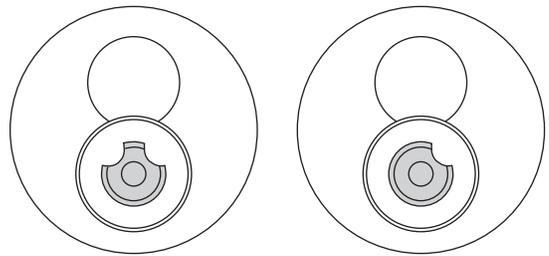

KIK, KIL, Everest 29, Primus, & Classic

## Full size interchangeable core (FSIC)

Schlage introduced its Full Size Interchangeable Core (FSIC) in 1984. Like the key-in-knob/key-in-lever cylinders, the core uses a cap pin and spring mechanism, but the cap pin also serves to drive the cam or tailpiece.

Housings and tailpieces manufactured before the Primus core was introduced only had clearance for the conventional cap pin. Now, all FSIC housings and tailpieces are made to accommodate both cap pin locations.

Current Design

Pre-1992

## UL437

Conventional Schlage cylinders are available in a standard configuration as well as with a UL437 option (Primus secondary locking mechanism required). The catalog numbers associated with a standard cylinder are 20-7XX while the catalog numbers associated with the UL437 cylinder are 20-5XX.

The UL437 Primus/Primus XP/RP cylinders incorporate drill resistant components for additional security.

UL437 is not available for IC cores (FSIC or SFIC).

### Modular cylinder note:

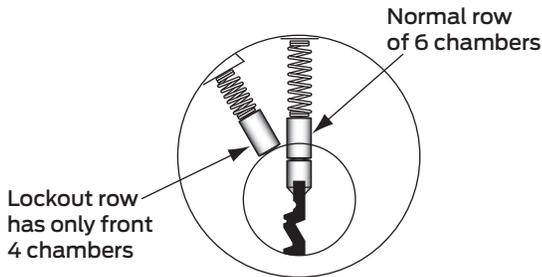

With the introduction of the modular cylinder, the cap pin & spring location was moved to the upper right when viewed from the rear. Additionally, the cam attachment types were standardized to a single screw attachment. Cams are available to fit multiple manufacturers' lock designs and are separated by cylinder length increments. One cam covers 1/8", 3/8", and 5/8", and the other cam is designed for 1/4", 1/2", and 3/4" cylinder length increments.

## Lockout cylinder

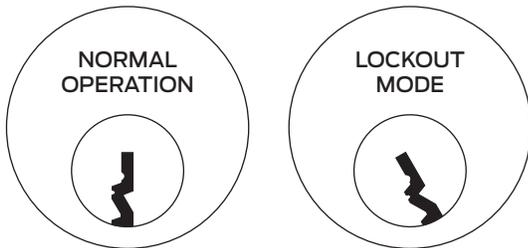

# Lockout cylinder

The Primus/Primus XP lockout cylinder is for use in applications in which it is necessary to temporarily disable the cylinder. It is essentially a very basic access control device. Note: The lockout cylinder is not available for Primus RP.

The lockout cylinder utilizes a standard 6-pin chamber row as well as a 4-pin chamber row with a special key.

When the plug is in its standard operating position all keys will operate the lock. Temporarily disable to regular operating keys, the plug can be turned with the special key to align the bottom pins with the lockout row of pins.

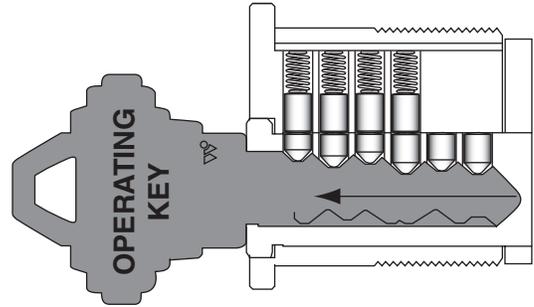

## Pinning rules

1. The fifth cut must be at least a #3 depth and the sixth cut must be equal to or deeper than the fifth cut.
2. Lockout cylinders must NOT be master keyed. When keys are inserted quickly, master pins may remain in the shell. This could cause a lockout, trap an operating key, or just prevent further operation of the cylinder.

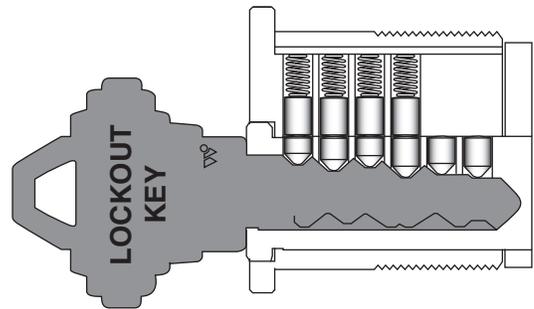

## How the lockout cylinder works

### Operating key turned to the Lockout Position

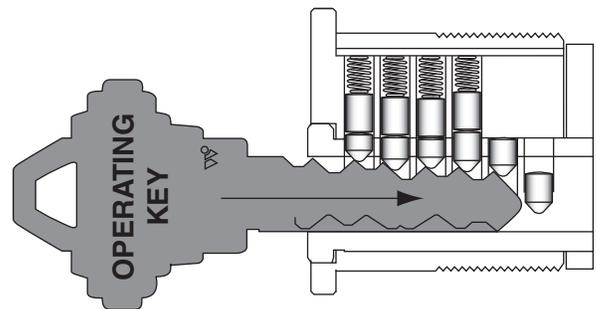

The operating key cannot be removed in the lockout position because the back two pins are unable to disengage from the key.

### Lockout key turned to the lockout position

The last two notches in the key are removed allowing the key to exit the cylinder.

### Operating key entering in lockout position

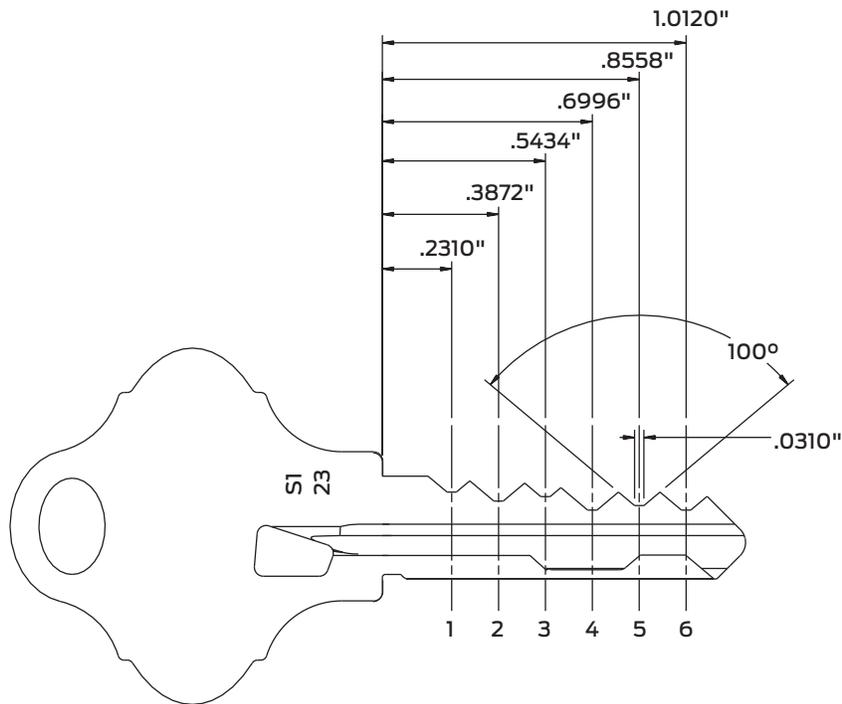

The operating key cannot enter the cylinder because the back two pins are not able to settle into their biting spaces on the key.

NOTE: Lockout cylinders are not available in the new modular cylinder design.

## Key bitting specifications

# Key bitting specifications

The following specifications are the same for Schlage Classic™ keys, including Primus®

MACS = 7	
Increment:	0.015"
Progression:	Two Step
Blade Width:	.343"
Depth Tolerance:	+ .002" - 0
Spacing Tolerance:	± .001"

Root depths			
0	.335"	5	.260"
1	.320"	6	.245"
2	.305"	7	.230"
3	.290"	8	.215"
4	.275"	9	.200"

Cuts are read and written bow to tip. The patented Primus side bitting process is done at the Schlage factory. Key blanks have side bitting already milled.

## Pins and springs

Bottom pins		
Size	Length	Part no.
0	.165"	34-300

6	34-006	34-228
7	34-058	34-229

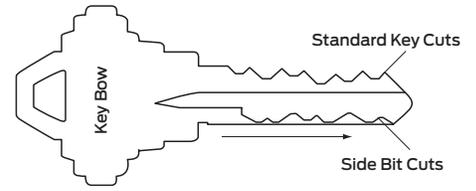

Top pins			
Size	Length	Part no.	Application
1	.235"	34-101	Pin Stack total = 0, 1, 2, 3
2	.200"	34-102	Pin Stack total = 4, 5, 6
3	.165"	34-103	Pin Stack total = 7, 8, 9

## Key bitting specifications

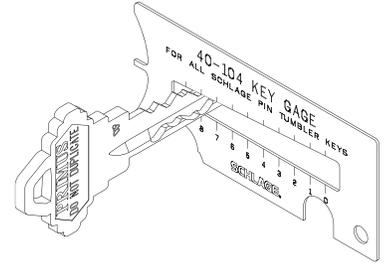

### Reading keys

All Primus keys will have exactly six standard cuts and five side bit cuts, which should be read from the bow of the key to the tip.

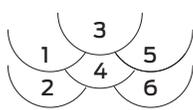

### Standard cuts

Standard key cuts should be read using the Schlage key gauge (40-104). Insert key into widest end and slide until key stops. The nearest number is the key cut depth.

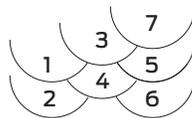

### Side bit cuts

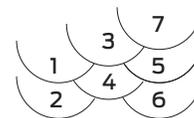

There are six side bit cut possibilities for Primus and Everest Primus and seven side bit cut possibilities for Primus XP and Everest Primus XP.

Primus® and Everest® Primus®

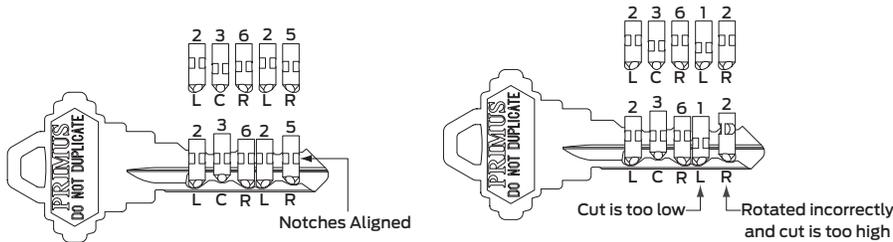

Primus® RP

Primus® XP and Everest® Primus® XP

Each of the side cuts raise and rotate the finger pin in order to align the notch in the pin to the notch in the side bar. If a side cut is misread, the pin will not align with the side bar by being too high, too low or rotated in the wrong direction.

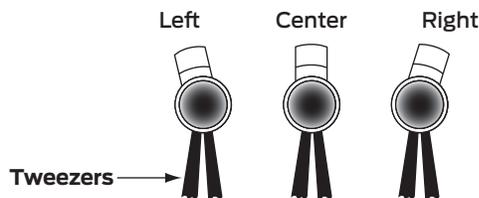

### Reading side pins

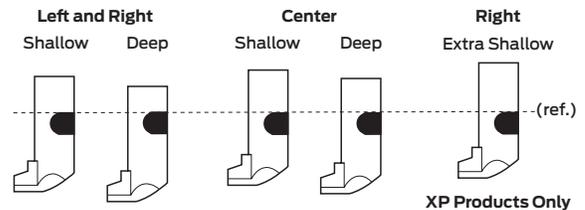

Learning to read finger pins is useful because pins can get spilled or mixed in with other size finger pins.

In 1998 the bottom of the finger pin was redesigned. This does not affect the functionality of the pins or the technique used for reading the pins.

#### 1. Determine the angle

#### 2. Determine the depth

#### 3. Convert angle and depth to numbers

	Left	Center	Right
Deep	2	4	6
Shallow	1	3	5
Extra shallow			7

# Key control levels overview

Below is a chart that provides an overview and comparison of the different key control levels. In-depth information is covered in the pages following.

## Dealer controlled systems

Dealer controlled systems are sold and serviced by the locksmith or dealer who sold the system. End users must order keys and request servicing through the original dealer.

## End user exclusive systems

End user exclusive systems are sold directly to and controlled by the end user. The systems are generally sold to larger businesses or those that need a very high level of security. Side bit milling is exclusive to the end user based on either a random assignment, the first two digits of the zip code, time zone or on a nationwide basis.

		Primus XP levels			Cylinder and key ordering process			
		Classic	Everest 29	Exclusivity	Commitment	End user	Dealer	Shipped to
Dealer controlled	1			None	None	Order through any authorized Schlage dealer	Standard order	To dealer from distributor
	1+	7		Zip code (first 3 digits)	Formal agreement and initial Primus XP inventory order	Order through originating Primus XP dealer only	Dealer to provide Primus XP I.D. and keyway section name or number	To dealer from factory
	2	8		Time zone	Formal agreement and initial Primus XP inventory order			
End user controlled	3U	9U		Random (not exclusive)	Initial purchase of 59 or fewer cylinders	Provide signed face sheet with order specifying keyway to any Primus XP authorized dealer	Dealer to provide end user's Primus XP I.D. and keyway section name or number	End user determined
	3G	9G		Zip code (first 2 digits)	Initial purchase of 60 or fewer cylinders			
	4Z	9Z		Time zone	2000 or more cylinders must be maintained or alternative fee based arrangement			
	4N	9N		Nationwide	4000 or more cylinders must be maintained or alternative fee based arrangement			

Note: Primus RP has levels like Primus and Primus XP, but will not come with a card.

# Key control procedures: dealer controlled systems

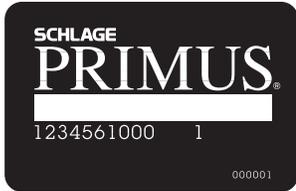

## Identification cards

Note: Primus RP has levels like Primus and Primus XP, but will not come with a card.

The dealer is responsible for stocking ID cards for levels 1, 1+, 2, 7 and 8 and verifying all authorized signatures to issue new keys as key blanks are not permitted to be sold to end users.

The card for each level bears a unique colored stripe, dealer information and a signature panel on the back. When receiving an order for new keys, it is the responsibility of the dealer to verify the signature on the back of the card.

### ID Cards (Order in multiples of 50)

### ID Cards (Order in multiples of 50)

Level 1	40-061
Level 1+	40-065
Level 2	40-062
Everest Primus	40-060*

\* Specify level 7 or 8

Level 1	40-061-XP
Level 1+	40-065-XP
Level 2	40-062-XP
Everest Primus	40-060-XP*

\* Specify level 7 or 8

## Restricted key order form

The restricted key order form is available for no charge and makes the process of tracking keys very easy. The end user receives one copy for his records and the dealer retains a copy in his records.

**SCHLAGE PRIMUS**

WRITE QUANTITY OF KEYS DESIRED	▶	
FURNISH ORIGINAL KEY GROUP SYMBOL, OR, IF UNKNOWN, PROVIDE ACTUAL BITTING OF KEY.	▶	

I hereby authorize the above Schlage dealer to order the exact quantity of RESTRICTED PRIMUS keys that I have indicated and whose code designation is imprinted herein, and I hereby certify that I am the owner, or authorized agent of the owner, of the lock cylinder this specified restricted key operates and I am authorized to place this order.

MS E110 Rev. 9/07 **SCHLAGE**

## Primus control register MS-E160

Though not required, dealers should use this form (or create their own form) to track key issues, inaccurate cuts, key blank shipments received and discrepancies.

## Issuing ID cards

It is recommended that the dealer consistently use one of the following procedures to issue ID cards to end user customers.

1. Issue a card to each end user or authorized signatory. The end user must keep the card and present it each time a key is requested. Verify the signature with the back of the card and verify the validity of the card in the log book.
2. Issue a card to each end user or authorized signatory. Keep all signed cards in a secure location with the key records. Verify the signature on the back of the card and validity of the card in the log book each time a key is requested.
3. When multiple signatures are required, use the Primus Signature Card. This can be used in addition to or instead of ID cards for the Dealer Levels. **This method should not be used with Level 1 as the end user may request keys from any Level 1 dealer.**

## Managing lost, stolen or invalidated cards

Each ID card has a unique serial number in the lower right corner. If a card is reported lost or stolen or a business changes authorized personnel and a previously authorized card holder refuses to surrender a card, the dealer must note in his log that the card is no longer valid to obtain keys.

Card serial number and signature verification should be part of every key authorization.

## Managing key blank inventory

It is important to keep an accurate record of key blank inventory and a detailed log of keys issued in case a question arises from an end user or law enforcement agency.

Each incoming order of Primus blanks should be logged with a transaction on a restricted key order form, signed and dated by the employee who received and counted the blanks.

All inaccurate cuts should also be documented on one of these forms, signed and dated by the employee who handled the transaction and logged into the main book.

The total number of key blanks received, minus inaccurate cuts and keys issued, should always equal the number still on hand. The dealer should reconcile the log periodically and also log any discrepancies at that time. Discrepancies may indicate a breach in security or a careless employee.

# Key control procedures: end user controlled systems

## Overtur keying - restricted products

Digital authorizations can be created and easily managed through the Over Keying portal, <https://restrictedproduct.allegion.com>.

The website allows users to easily manage all order authorizations for restricted key systems. It eliminates paperwork by providing product authorizations.

### Setup and Re-ordering

- End Users creates account through Overtur Keying - Restricted Products portal. Manage who can generate authorizations and order products for your key system
- Create digital authorization to be submitted with order.

## Signature verification

Authorization for the end user levels is performed at the Schlage Key Control Department. The dealer is responsible for submitting the end user's signed forms to Schlage with each order.

## Primus signature card

The Primus signature card is found at the back of this manual and should be used to register each project and its authorized signatories with the factory.

The dealer should complete the form with the end user (job) name, street address and zip code. The zip code is used to maintain the varying degrees of geographical exclusivity offered at the end user levels.

There is space for up to five authorized signatures on the signature card. All signatures will have equal authority to order locks, keys, key blanks and cylinders unless otherwise noted. The signature at the top of the list has authority to add and delete signatures from the card, so it is important that the appropriate person is the top signer.

## Primus face sheet form

The Primus Face Sheet form is located in the back of this manual and is required for all Primus, Primus XP, and Primus RP factory orders.

**Levels 3, 4 and 9 are the highest levels of key control. For this reason, no faxed or photocopied signatures will be accepted by the Primus Key Control Department.**

It is permissible to fax or photocopy the blank forms in order to speed up the authorization process when the end user has no blank forms. However, once the page is signed it becomes an original and cannot be faxed or photocopied, then submitted for an order.

It is also possible to order a supply of blank forms at no charge using the following form numbers:

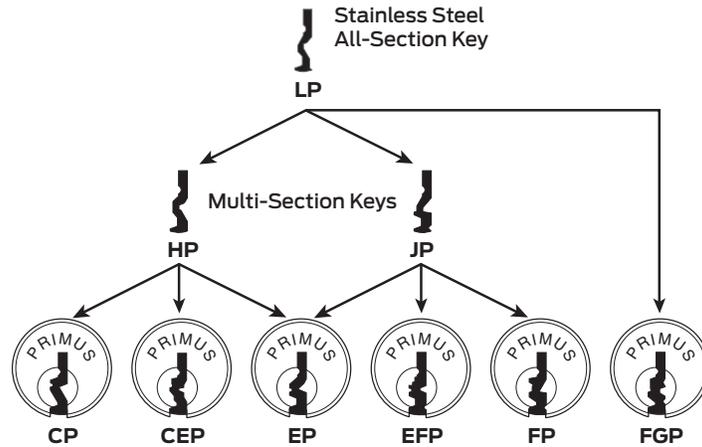

Signature Card	MS-E130
Face Sheet	MS-E120

# Classic Primus and Classic Primus XP/RP keyways

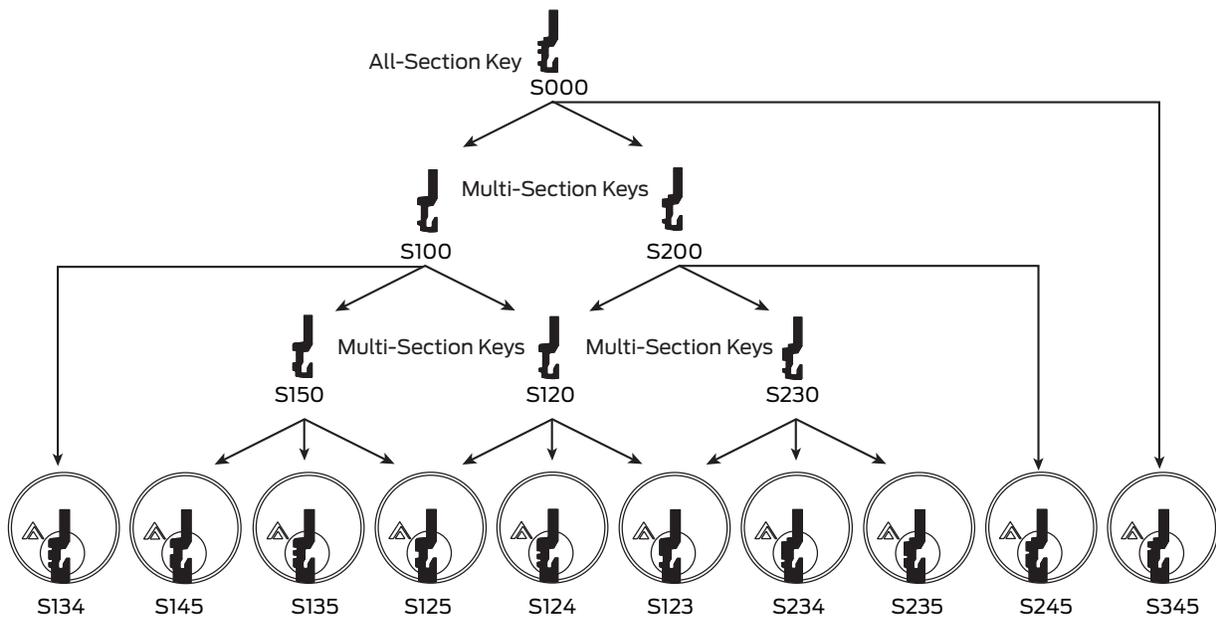

Level 1 and Level 1+ keyways

Level 2, 3 and 4 keyways

# Everest 29 Primus and Everest 29 Primus XP keyways

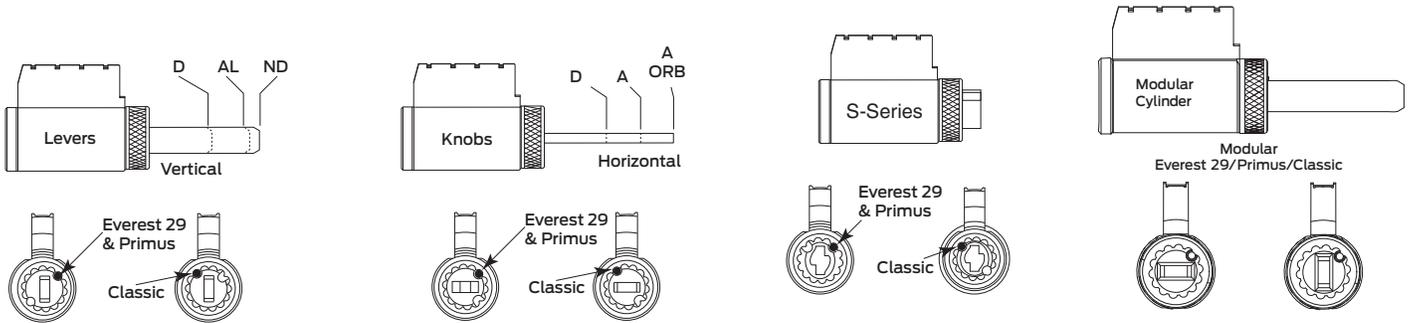

New master key systems begin here and expand to the right

Stock keyway for commercial sales

NOTE: Not all available keyway families are shown.

# Key-in-knob/key-in-lever cylinders

The part numbers for assembled Classic Primus and Everest Primus cylinders are the same, except for the keyway suffix. To order XP products, add the suffix “-XP” to the end of the complete cylinder number. (Example, “20-793-XP S123” is Everest 29 Primus XP cylinder with a S123 keyway.) To order RP products, add the suffix “-RP” to the end of the complete cylinder number, only available in Classic Obverse keyways. (Example, 20-793-RP C is Primus RP cylinder with a Schlage C keyway).

Note: Everest & Primus and Classic cap pin positions are non-modular

## Schlage lock sets

Series	Design	Cylinder mechanism	Complete cylinder	Plug	Shell	Tailpiece
A, H	Except Orbit	Primus	20-724	33-136 for Classic	A508-655	A301-337

## Mortise cylinders

### AD-Series Schlage full size cylinder tailpiece

For all chassis types, tailpiece part number: 23446339.

## Mortise cylinders

Schlage L-Series (except L9060 outside)				
Modular Cam		Description	Cylinder Mechanism	Complete Cylinder
For modular cylinders introduced July 2010				
		Cylinder with Compression Ring & Spring: L & N Escutcheons	Primus Core	20-793
			Primus XP Core	20-793-XP
			Primus RP Core	20-793-RP
		Cylinder with Compression Ring, Spring, and 3/8" Blocking Ring: Rose Trim	Primus Core	20-787
			Primus XP Core	20-787-XP
			Primus RP Core	20-787-RP

\* Lockout cylinders utilize the traditional, non-modular cam L583-153.

Von Duprin, Monarch, and other straight cam applications				
Modular Cam		Description	Cylinder Mechanism	Complete Cylinder
For modular cylinders introduced July 2010				
		Cylinder with Compression Ring & Spring: L & N Escutcheons	Primus Core	20-701
			Primus XP Core	20-701-XP
			Primus RP Core	20-701-RP
		Cylinder with Compression Ring, Spring, and 3/8" Blocking Ring: Rose Trim	Primus Core	20-700
			Primus XP Core	20-700-XP
			Primus RP Core	20-700-RP

\* For L9060 outside or application that may require an extended cam length, the following cam substitutions can be made in the field to modular cylinders: L583-941 (for 1-1/8", 1-3/8", 1-5/8") and L583-942 (1-1/4", 1-1/2", 1-3/4").

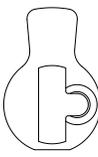

\*\* Lockout cylinders utilize the traditional, non modular cam B502-948.

Adams Rite MS, 4500, and 4700 Series, Lori 4500, Corbin Russwin DL30000				
Modular Cam		Description	Cylinder Mechanism	Complete Cylinder
For modular cylinders introduced July 2010				
		Cylinder with 3/8" Blocking Ring	Primus Core	20-706
			Primus XP Core	20-706-XP
			Primus RP Core	20-706-RP

\* Lockout cylinders utilize the traditional, non-modular cam B502-944.

Adams Rite 4070				
Modular Cam		Description	Cylinder Mechanism	Complete Cylinder
For modular cylinders introduced July 2010				
		Cylinder with Compression Spring	Primus Core	20-708
			Primus XP Core	20-708-XP
			Primus RP Core	20-708-RP

## Mortise cylinders

<b>Traditional (Non-Modular) Cams</b>		
For cylinders manufactured prior to July 2010. Cams sold separate, not sold with complete cylinders except for lockout and concealed shell cylinders.		
<b>Drawing</b>	<b>For use on Primus cylinders in:</b>	<b>Part Number</b>
	Schlage L-Series (except L9060 outside)	L583-153
	Schlage L9060 Outside, Von Duprin, and other straight cam applications	B502-948
	Adams Rite MS, 4500, 4700 Series, Lori 4500, and Corbin Russwin DL3000 Series	B502-944
	Adams Rite 4070	B502-945

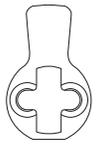

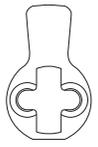

## Mortise cylinders

### Schlage Primus mortise cylinder cams to operate other manufacturers' locks

Traditional cams		Modular cams*		Description	
		Sizes 1 1/8, 1 3/8, 1 5/8"	Sizes 1 1/4, 1 1/2, 1 3/4"		
For cylinders prior to July 2010	B520-366 	For modular cylinders introduced July 2010	B520-730 	B520-731 	Corbin Russwin® DL4000 Series (Old Corbin 420 and Russwin 1503) Previously known as XB11-656
	B520-309 		B520-732 	B520-733 	
	B520-367 		B520-734 	B520-735 	Corbin Russwin® A65 ML2200 master ring deadbolt functions manufactured before 6/10/93 and old Russwin cast iron residential Locks Previously known as XB11-887
	B520-329 		B520-736 	B520-737 	

## Concealed shell mortise cylinders

Schlage L-Series (except L9060 outside)					
Cams		Description	Cylinder mechanism	Complete cylinder	
For cylinders prior to July 2010	L583-254 Classic	 	Cylinder Only: L Escutcheon	Primus Controlled Access	20-789
				Primus XP Controlled Access	20-789-XP
				Primus RP Controlled Access	20-789-RP
				Primus UL437	20-589
				Primus XP UL437	20-589-XP
				Primus RP UL437	20-589-RP

Schlage L9060 outside					
Cams		Description	Cylinder mechanism	Complete cylinder	
For cylinders prior to July 2010	B502-191 Classic	 	Cylinder Only: L Escutcheon	Primus Controlled Access	24-767
				Primus XP Controlled Access	24-767-XP
				Primus RP Controlled Access	24-767-RP
				Primus UL437	24-567
				Primus XP UL437	24-567-XP
				Primus RP UL437	24-567-RP

\* Modular cylinder cams may be used with Classic, Everest and Primus key sections. Use appropriate cam for cylinder housing size.

NOTE: For more information on modular cylinders, see page 9.

Traditional cams are available as parts only and cannot be ordered with complete cylinders; however, concealed shell mortise cylinders are the exception to this rule.

Note: Specify keyway and finish: 522, 606, 622, or 626.

# Tools and sales support items

**Primus® pin kit**

40-070

Contains finger pins, finger pin springs, sidebars, sidebar springs and plug holder (40-066).

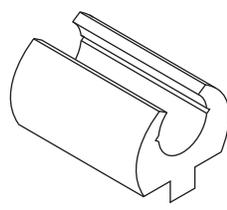

**Pin kit**

40-119

Contains all conventional pins and springs, modular follower M504-548, tweezers and M540-056 cylinder cap removal tool.

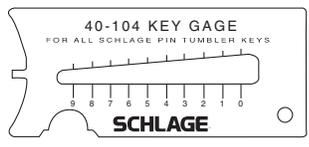

**Plug holder**

40-066

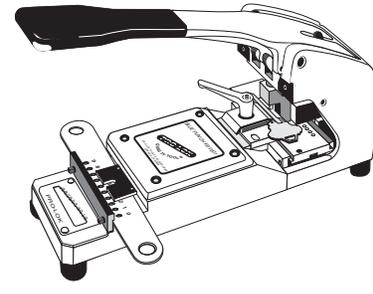

Has grooves for Primus sidebar. Included in 40-070 finger pin kit.

**Key gauge**

40-104

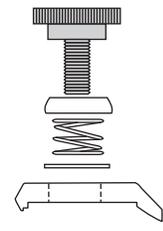

**Key biting punch**

40-075

Blue punch for cutting Obverse and Everest Open C family keys.

**Vise jaw upgrade kit**

40-074

Replaces jaw on Blue punch key machines manufactured before July 1999 to add Everest C family capability to Obverse family key machines.

# Interpreting box labels

# Three parts to key control

How do you account for issued keys? How do you know who has keys to areas of your building or campus? Facilities with proper key control procedures in place know the answers to these questions.

To help facility and security personnel to know who has access to the mechanical locks in their buildings, Schlage offers a three-part solution.

## 1. Key issue policies

Without a sensible key control policy backed by top management, security can deteriorate quickly. The key control policy should specifically define who may authorize keys to be cut.

Issuing master and grand master keys must be done based on actual need. After all, it does little good to prevent keys from being duplicated externally if many “legitimate” copies of the top master key are issued, increasing risk of loss or theft.

Consider the following ideas which may be utilized (and modified as needed) if deemed appropriate for your facility:

- Establish suitable management levels (department head, shop foreman, etc.) to authorize keys to be cut or issued to employees. Control high level access by requiring higher level approval for master and grand master keys.
- Collect a deposit for all keys issued.
- Require employees to sign a receipt stating that his/her final paycheck will be withheld until all keys are returned. This requires coordination with the Human Resources or Accounting Department.
- Have the key holder or the department manager sign a receipt making them responsible for the cost of rekeying any areas operated by the lost or stolen key.
- Serial number all keys to track multiple copies of the same key issued to different persons. This allows the key control center to trace any key to the rightful key holder.
- Include language on a key receipt that forbids lending of keys to other employees.
- Conduct periodic spot checks to make sure employees have their issued keys.
- Do not store quantities of unused master keys. Destroy them or provide secure storage if necessary.
- Trades, contractors, and maintenance personnel should turn in their master keys at the end of their shifts and pick them up again the next day.
- Enforce adherence to policies with consequences.

## Three parts to key control

### 2. Track issued keys with SiteMaster 200

Implementing a system to track each and every issued key is critical to provide immediate information about who has access to any given area at any given time. Schlage SiteMaster 200 helps provide this critical information.

SiteMaster 200 has fields for key holder name, key symbol (code), serial number of key, door name, number, etc. Once the data has been entered you can sort it in a variety of ways to produce reports or simply look up an individual person, key, door, etc.

To be effective, one person should be designated responsible for maintaining the database, with backup personnel designated as necessary. Too many people with access to the database can lead to a breakdown in the integrity of the information.

### 3. Use patented keys

Be sure Parts 1 and 2 are in place.

Install Primus or Everest Primus patented keyways and you can be reasonably sure that your keys won't be copied. It would be difficult, time consuming, and a violation of federal patent law to make an unauthorized copy of a Primus XP/RP or Everest Primus XP key. A person who makes an unauthorized Primus XP/RP or Everest Primus XP key could be subjected to legal action from Schlage.

## Ordering Primus

### Cylinders

Everest Primus/Everest Primus XP and Classic Primus/Primus XP/Primus RP complete cylinders have the same pricing and part numbers. As with Classic Primus Levels 3 and 4, face sheets are required for Level 9 orders.

To order:

1. Select the Primus cylinder from the cylinder Price Book pages.
2. If a specific keyway is desired, specify the Classic or Everest keyway.
3. Specify keying, finish, cylinder length, or any other fields as necessary.

#### Example:

How to order a zero-bitted Everest Primus XP non-UL cylinder with a 626 finish and C123 keyway for a D-Series Lever lock:

Step 1: The Primus cylinder part number is 20-750-XP

Step 2: The keyway desired is C123

Step 3: The keying is zero bitted (000000) and the finish desired is 626.

Order: 20-750 626-XP C123-000000

### Cylinder bulk packs

All Primus and Primus XP products are available in a Bulk Pack (see Bulk packs on page 33). No signatures or authorizations are required when ordering Bulk Pack Cylinders.

To Order:

1. Choose your Bulk Pack from the Price Book pages based on the cylinder format, finish, and keyway. Check the Express Stock listing for faster delivery.
2. For key-in-knob/lever or mortise cylinders, choose the required tailpieces or cams and collars from the existing Everest Bulk Pack tailpiece, cam and collar offering (Everest, Classic Primus, and Everest Primus all use the same tailpieces).
3. If needed, order a 40-070 Primus pin kit or Primus components.
4. Order keys as needed.

Note: Orders for Level 3, 4, and 9 keys must be accompanied by a face sheet.

Shipping instructions:

It is the policy of Schlage Commercial to ship Level 3, 4, and 9 products directly to the end user/owner to maximize control and security of your Primus cylinders and keys. Be sure that the shipping address provided below includes the name of the specific individual in your organization to whom Primus cylinders and keys should be shipped. Schlage will ship to alternate locations, if so instructions, with the understanding that the undersigned assumes full responsibility for the security and care of the material to be so shipped. Unless otherwise specified below, Level 3, 4, and 9 products will be shipped to the original end user/owner address on file.

Masterkeys may be shipped to a separate location if desired, at not extra charge. If all keys are to be packed and shipped separately, there is an additional charge in accordance with Schlage PKI (Pack Keys Independently) pricing as listed in Schlage's current price book.
